	National University of Computer and Emerging Sciences (Lahore)		
	Course:	OOP	Course code: CS217
	Section:	BSCS-2B	Semester: Spring 2024
	Duration:	20 minutes	Total Marks: 10
	Date:		ID: B
	Name:	M Khizal	Roll no: 23L-0627

Question 1: Give the output of the following code snippet. Identify syntax or logical errors, if present in the code, and suggest the required correction.

```
void Print(int * arr, int size)
```

```
{
    cout<<"array is:";
    for(int i = 0; i < size; i++)
    { cout << arr[i] << " "; }
    cout << endl;
}
```

```
int main()
```

```
{
    int* arr = new int[6];
    arr[2] = 4; arr[0] = 2;
    arr[3] = 8; arr[1] = 1;
    arr[4] = 5; arr[5] = 3;
    Print(arr,6);
    for (int i = 0; i < 3; i++)
    {
        int temp = *(arr + 2 * i);
        *(arr + 2 * i) = *(arr + 2 * i + 1);
        *(arr + 2 * i + 1) = temp;
    }
    Print(arr,6);
}
```

Output:

use of * notation instead of []?

use of for loop in updating
for(int i = 0; i < 6; i++)
cin >> *(arr + i)

2 1 4 8 5 3

1 2 8 4 3 5

Error (if any):

- delete[] arr is necessary for 2d dynamic array ✓ == memory leakage
- Use for loop for entering elements is preferable?
