Define composition, aggregation 8
association

Composition:-
Composition means to make an object
of class

Example:-

Class person   Person.p()
{   name();
    string name;
    string int roll age no;
};

Aggregation:-
Aggregation means Jx

Association:- Aggregation
Association A means using two or more
objects of one class
Class person
{
    string Name;   person.p()
    int Roll no; Cnic   {
    age;   display Name();.p
int string A cn no;   display Roll no(); age.p
};   };

Ag Association:-
Association means associating one.
Class with another by creating its object
Example in the other class.
For example:
Class person

```
class student

    {
    {
        int Roll no;
        int ARN no;
        string Cnic;
                                };
```

```
Class person;
    {
        string Name;
        int  age;
        int Cnic;
        student .S1 ( ) ;
            {
            {
                display. Roll no. S1 ( );
                display. ARN no. S1 ( );
                display .. Cnic. S1 ( );
                };
                };
```
